MEDIA ADVISORY

Edison Students Learn about Solar Installation

What: Edison High students learn about solar installation

When: Friday, Nov. 8, 2019  
8 a.m.-noon

Where: Edison High School  
540 E. California Ave. (93706)

Students from Edison High School’s Green Energy and Technology Academy will learn how to install solar panels and navigate electrical systems during a one-week intensive solar training from local solar company Grid Alternatives.

Grid Alternatives has been working with students for the last month on a solar program, including solar arrays, workplace safety and electrical systems design.

“Through this training with Grid Alternatives, students will get hands-on experience in the growing field of solar energy. This practical experience adds to what they are learning inside the classroom,” said Superintendent Bob Nelson.
